The subproject and investigator (PI) may have received primary funding from another NIH source, and thus could be represented in other CRISP entries. The institution listed is for the Center, which is not necessarily the institution for the investigator. The objective of this proposal is to develop, optimize and evaluate magnetic resonance (MR) imaging sequences and techniques for in vivo evaluation of white adipose tissue in the body and specifically in the head and neck in humans. This work should provide new insights and better methods to study adipose tissue physiology in humans. The development of head and neck fat reference tissue is aimed at providing quantification and differentiation of gray and white adipose tissue in head and neck anatomy. It will enable differentiation between fat tissue in the epidermis, superficial subcutaneous and deep subcutaneous fat, and visceral adipose tissue in the carotid, thyroid, paratracheal and epicardial spaces. An atlas of head and neck adipose tissue will be developed with these reference tissue methods so that correlations with pathology of the disease, age, sex and race can be made. An interactive tool will be developed allowing the user to manipulate and manipulate images and reference images.National Highway 717 (India) National Highway 717, commonly referred to as NH 717 is a national highway in India.
